

Tolstoy Foundation Rehabilitation and Nursing Center

TESTIMONIAL –

Tolstoy Foundation Rehabilitation and Nursing Center had purchased a Sterile-Bright™ portable ultraviolet (UV) sterilization lamp model STRL-PU-250WUV for our nursing home facility as an additional alternative to chemical disinfecting.

We could not be more satisfied with the results. Our cleaning staff is able to sanitize and deodorize resident rooms / offices within 5-minutes with 25mJ/cm² of germicidal UV that we measure using dosimeter cards.

This amount of UV is sufficient to deactivate Coronaviruses like Covid-19 and Rhinoviruses. In addition, it is also effective in reducing exposure to pneumonia pathogens (ie: Streptococcus pneumoniae and pneumococcus).

Sterile-Bright™ has the added advantage of generating germicidal and deodorizing ozone that is extremely important for our nursing home. The ozone can reach places within a space that may not be directly exposed to UV light during treatments. Odor control is extremely important in a facility like ours. We were searching for an alternative to chemical treatments that are labor-intensive, costly, and potentially harmful to sensitive individuals. We researched other UV technology and found that it was either ineffective or extraordinarily expensive.

Our portable Sterile-Bright™ ultraviolet (UV) sterilization lamp is a great addition to our sanitizing routine because it is easy-to-use, safe, extremely fast, and verifiably effective. I strongly recommend this great product.
